

# Laravel Multi-Vendor Ecommerce

I managed to change my entire Laravel E-commerce website which was built via AJAX to Livewire

These are the important points that I was able to apply:

- Dynamic filters on the store page
  - Currency converter on product detail page  
(Update product price in currencies by selecting size)
  - Product evaluation and rating
  - Product taxes / GST System
  - Shopping cart processes.
  - My Wish list.
  - Coupon system.
  - Multiple delivery addresses to "update shipping charges amount"
  - Checkout page
  - Cash on delivery (Payment method)
  - Cancellation of the order (new order)
  - Re-order after cancellation
  - Exchange the order after cancellation
  - Generate order invoice (order status delivered)
-
